

IN THE CLAIMS

Please amend the claims as follows:

1-56. (Canceled).

57. (Currently amended) A computerized method for determining a fair value of a first ~~asset security listed on a securities market that is closed~~ ~~not currently being traded in a liquid market~~, comprising:

electronically receiving historical price data ~~regarding~~ said first ~~asset~~, wherein said historical price data comprises data for a plurality of price-related variables ~~related to~~ said first ~~asset~~;

electronically performing a multivariate regression analysis on said historical price data; and

electronically calculating a fair value of said first ~~asset security~~ based on said multivariate regression analysis and on values of at least two of said plurality of price-related variables.

58. (Currently amended) A method as in claim 57, wherein said first ~~asset security~~ is assigned to a portfolio of assets securities, a second ~~asset security~~ is assigned to said portfolio of assets securities, and said second ~~asset security~~ is currently traded in a liquid market, further comprising assigning a fair value to said second ~~asset security~~ based on a recent trading price of said second ~~asset security~~.

59. (Previously presented) A method as in claim 57, wherein said multivariate regression analysis comprises an in-sample step-wise regression.

60. (Currently amended) A method as in claim 57, wherein said step of electronically calculating a fair value comprises calculating a function of a recent closing price of said first ~~asset security~~ and a recent depositary receipt price for said first ~~asset security~~.

61. (Canceled)

62. (Currently amended) A method as in claim 57, wherein said step of electronically calculating a fair value comprises calculating a function of a most recent closing price of said first ~~asset security~~ and a second most recent closing price of said first ~~asset security~~.

63. (Cancelled)

64. (Currently amended) A method as in claim 57, wherein said step of electronically calculating a fair value comprises calculating a rate of change of a securities market futures index price.

65. (Previously presented) A method as in claim 57, wherein said step of electronically calculating a fair value comprises calculating a rate of change of a sector index price.

66. (Currently amended) A method as in claim 57, wherein said step of electronically calculating a fair value comprises selecting a subset of two or more variables from said plurality of variables, wherein said two or more variables have recently proven reliable in predicting an opening price for said first asset security.

67. (Currently amended) A method as in claim 57, wherein said historical data comprises data regarding at least one currency exchange rate, wherein said currency exchange rate is for exchanging U.S. currency with currency for a country with a securities exchange on which said first security is traded and that has closed.

68. (Currently amended) A method as in claim 67, wherein said data regarding at least one currency exchange rate comprises data regarding an exchange rate at a most recent local closing time for said first asset security.

69. (Currently amended) A method as in claim 57, further comprising electronically receiving a request for a fair price for said first asset security.

70. (Currently amended) A method as in claim 57, wherein said historical data comprises data regarding a local opening price for said first asset security.

71. (New) A method as in claim 58, wherein said portfolio of securities is held by said mutual fund, and further comprising calculating a fair value of said mutual fund based in part on fair values calculated for said first and second assets.

72. (New) A computerized method for determining a fair value of a security traded on a securities market that is open part of the time and closed part of the time, at a valuation time when said security is not actively traded on said market, comprising:

electronically receiving prices of said security during a plurality of periods when said market was open;

electronically receiving historical market data for a plurality of financial asset market based variables other than prices for said first security;

electronically performing a multivariate regression analysis on said historical market data and said prices of said security during a plurality of periods when said market was open; and

electronically calculating a fair value of said first security at said valuation time based on said multivariate regression and on a price for said security during a period when said market was last open.

73. (New) A method as in claim 57, wherein said step of electronically calculating a fair value comprises calculating a change in a securities market futures index price.

74. (New) A method for determining at a valuation time fair values of securities held in a portfolio of securities, said portfolio comprising securities in a first group and securities in a second group, wherein each security in said first group is a security that is not being actively traded on a securities market at said valuation time, and wherein each security in said second group is a second security that is being actively traded on said securities market at said valuation time, said method comprising:

for each security in said first group, calculating a fair value of that security at said valuation time using the method of claim 72, and;

for each security in said second group, setting a fair value of that security at said valuation time to be equal to a market value of that security on said market.
